CUSTOMER'S PRODUCT NAME

TDK PRODUCT NAME

MULTILAYER CERAMIC CHIP CAPACITORS

C Series / Commercial Grade

High voltage (100V and over)

Please return this specification to TDK representatives.

If orders are placed without returned specification, please allow us to judge that specification is accepted by your side.

APPROVED	Person in charge

APPROVED	CHECKED	Person in charge

1. SCOPE

This specification is applicable to chip type multilayer ceramic capacitors with a priority over the other relevant specifications.

Production places defined in this specification shall be TDK-EPC Corporation Japan, TDK (Suzhou) Co., Ltd, and TDK Components U.S.A. Inc.

EXPLANATORY NOTE:

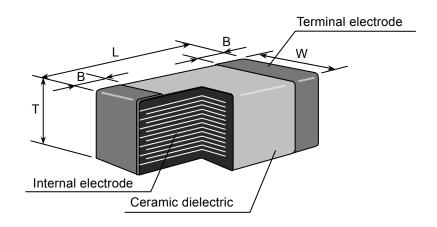

This specification warrants the quality of the ceramic chip capacitors. The chips should be evaluated or confirmed a state of mounted on your product.

If the use of the chips goes beyond the bounds of the specification, we can not afford to guarantee.

2. CODE CONSTRUCTION

(Example)	C4532	_X7R_	_3D_	222	_M_	<u>T</u>
	(1)	(2)	(3)	(4)	(5)	(6)

(1) Type

Please refer to product list for the dimensions of each product.

(2) Temperature Characteristics (Details are shown in table 1 No.7 and No.8 at page 5)

(3) Rated Voltage

Symbol	Rated Voltage
3 A	DC 1 kV
3 D	DC 2 kV
3 F	DC 3 kV

(4) Rated Capacitance

Stated in three digits and in units of pico farads (pF).

The first and Second digits identify the first and second significant figures of the capacitance, the third digit identifies the multiplier.

R is designated for a decimal point.

Example 222 \rightarrow 2,200pF

(5) Capacitance tolerance

Symbol	Tolerance	Capacitance
F	± 1 pF	10pF
K	± 10 %	Over 10pE
М	± 20 %	Over 10pF

(6) Packaging

Symbol	Packaging
В	Bulk
Т	Taping

3. RATED CAPACITANCE AND CAPACITANCE TOLERANCE

3.1 Standard combination of rated capacitance and tolerances

Class	Temperature Characteristics	Capacitano	ce tolerance	Rated capacitance
1	СН	10pF	F (±1pF)	10
1	C0G	Over 10pF	K (± 10 %)	E – 12 series
2	J B X7R X7S	K (± 10 %) M (± 20 %)		E –3 series

3.2 Capacitance Step in E series

E series	Capacitance Step											
E- 3	1.0			2.2			4.7					
E- 12	1.0	1.2	1.5	1.8	2.2	2.7	3.3	3.9	4.7	5.6	6.8	8.2

4. OPERATING TEMPERATURE RANGE

T.C.	Min. operating Temperature		
C H J B	-25°C	85°C	20°C
C0G X7R X7S	-55°C	125°C	25°C

5. STORING CONDITION AND TERM

5 to 40°C at 20 to 70%RH

6 months Max.

6. P.C. BOARD

When mounting on an aluminum substrate, large case sizes such as C4520 and C4532 types are more likely to be affected by heat stress from the substrate. Please inquire separate specification for the large case sizes when mounted on the substrate.

7. INDUSTRIAL WASTE DISPOSAL

Dispose this product as industrial waste in accordance with the Industrial Waste Law.

8. PERFORMANCE

		Q (Class1)	Ra Capad		Q	Leave the capacitors in ambient condition for 6 to 24h (Class1) or
			30pF ar	nd over	350 min.	24±2h (Class2) before measurement.
			10pF ar		275+5/2×C min.	Voltage conditioning (only for class 2)
			C : Rated capacitance (pF) 200% of initial spec. max.		tance (pF)	Voltage treat the capacitors under
		D.F. (Class2)			ec. max.	testing temperature and voltage for 1 hour.
		Insulation Resistance	1,000ΜΩ	min.		Leave the capacitors in ambient condition for 24±2h before measurement. Use this measurement for initial value

^{*}As for the initial measurement of capacitors (Class2) on number 8,11,12, 13 and 14, leave capacitors at 150 -10,0°C for 1 hour and measure the value after leaving capacitors for 24±2h in ambient condition.

Material: Glass Epoxy (As per JIS C6484 GE4)

P.C. Board thickness: 1.6mm

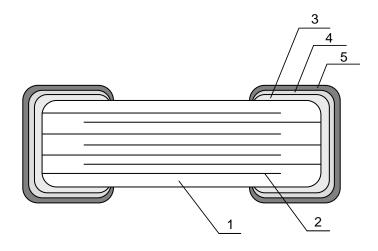

Copper (thickness 0.035mm)

Solder resist

TDK (EIA style)	Dim	ensions (r	mm)
	а	b	С
C3216 (CC1206)	2.2	5.0	2.0
C3225 (CC1210)	2.2	5.0	2.9
C4520 (CC1808)	3.5	7.0	2.5
C4532 (CC1812)	3.5	7.0	3.7
C5750 (CC2220)	4.5	8.0	5.6

9. INSIDE STRUCTURE AND MATERIAL

No.	NAME	MATERIAL		
NO.	INAIVIE	Class1	Class2	
1	Dielectric	CaZrO ₃	BaTiO ₃	
2	Electrode	Nickel (Ni)		
3		Copper (Cu)		
4	Termination	Nickel (Ni)		
5		Tin (Sn)		

10. RECOMMENDATION

It is recommended to provide a slit (about 1mm wide) in the board under the components to improve washing Flux. And please make sure to dry detergent up completely before.

11. SOLDERING CONDITION

Reflow soldering only.

12. Caution

	Caution						
No.	Process	Condition					
1	Operating Condition (Storage,	1-1. Storage1) The capacitors must be stored in an ambient temperature of 5 to 40°C with a relative humidity of 20 to 70%RH. The products should be used within 6 months upon receipt.					
	Transportation)	2) The capacitors must be operated and stored in an environment free of dew condensation and these gases such as Hydrogen Sulphide, Hydrogen Sulphic Chlorine, Ammonia and sulfur.					
		3) Avoid storing in sun light and falling of dew.					
		4) Do not use capacitors under high humidity and high and low atmospheric pressure which may affect capacitors reliability.					
		5) Capacitors should be tested for the solderability when they are stored for long time.					
		1-2. Handling in transportation					
		In case of the transportation of the capacitors, the performance of the capacitors may be deteriorated depending on the transportation condition. (Refer to JEITA RCR-2335B 9.2 Handling in transportation)					
2	Circuit design A Caution	2-1. Operating temperature Operating temperature should be followed strictly within this specification, especially be careful with maximum temperature. 1) Do not use capacitors above the maximum allowable operating temperature.					
		2) Surface temperature including self heating should be below maximum operating					
		temperature. (Due to dielectric loss, capacitors will heat itself when AC is applied. Especially a high frequencies around its SRF, the heat might be so extreme that it may damage itself or the product mounted on. Please design the circuit so that the maximum temperature of the capacitors including the self heating to be below the maximum allowable operating temperature. Temperature rise at capacitor surface shall be below 20°C)					
		 3) The electrical characteristics of the capacitors will vary depending on the temperature. The capacitors should be selected and designed in taking the temperature into consideration. 2-2. Operating voltage 1) Operating voltage across the terminals should be below the rated voltage. 					
		When AC and DC are super imposed, V _{0-P} must be below the rated voltage. (1) and (2)					
		AC or pulse with overshooting, V _{P-P} must be below the rated voltage. ———————————————————————————————————					
		Voltage (1) DC voltage (2) DC+AC voltage (3) AC voltage					
		Positional Measurement (Rated voltage) 0 V _{0-P} 0					
		Voltage (4) Pulse voltage (A) (5) Pulse voltage (B)					
		Positional Measurement (Rated voltage) V _{P-P} 0					

No.	Process		(Condition			
2	Circuit design ∴ Caution		e rated voltage, if re the capacitors may		ncy AC or pulse is applied,		
		The effective capacitance will vary depending on applied DC and AC voltages. The capacitors should be selected and designed in taking the voltages into consideration.					
		-	,	e used in AC and/or p s and generate audil	_		
3 Designing P.C.board		capacitors. 1) The greater the and the more like shape and size terminations.	The greater the amount of solder, the higher the stress on the chip capacitors, and the more likely that it will break. When designing a P.C.board, determine the shape and size of the solder lands to have proper amount of solder on the terminations.				
		Avoid using common solder land for multiple terminations and prosolder land for each terminations.					
		3) Size and recom	mended land dimer	nsions.			
			_	D

		to cause crack. Pl	ng jaw is worn out, it may give me lease control the close up dimens preventive maintenance and repla	ion of the centering jaw and			

No.	Process	Condition					
5	Soldering	5-1. Flux selection Although highly-activated flux gives better solderability, substances which increase activity may also degrade the insulation of the chip capacitors. To avoid such degradation, it is recommended following.					
		1) It is recommended to use a mildly activated rosin flux (less than 0.1wt% chlorine). Strong flux is not recommended.					
		2) Excessive flux must be avoided. Please provide proper amount of flux.					
		3) When water-soluble flux is used, enough washing is necessary.					
		5-2. Recommended soldering profile by various methods					
		Reflow soldering					
		Soldering Preheating Natural cooling					

5-3. Recommended soldering peak temp and peak temp duration

Temp./Duration	Reflow soldering		
Solder	Peak temp(°C)	Duration(sec.)	
Sn-Pb Solder	230 max.	20 max.	
Lead Free Solder	260 max.	10 max.	

Recommended solder compositions Sn-37Pb (Sn-Pb solder) Sn-3.0Ag-0.5Cu (Lead Free Solder)

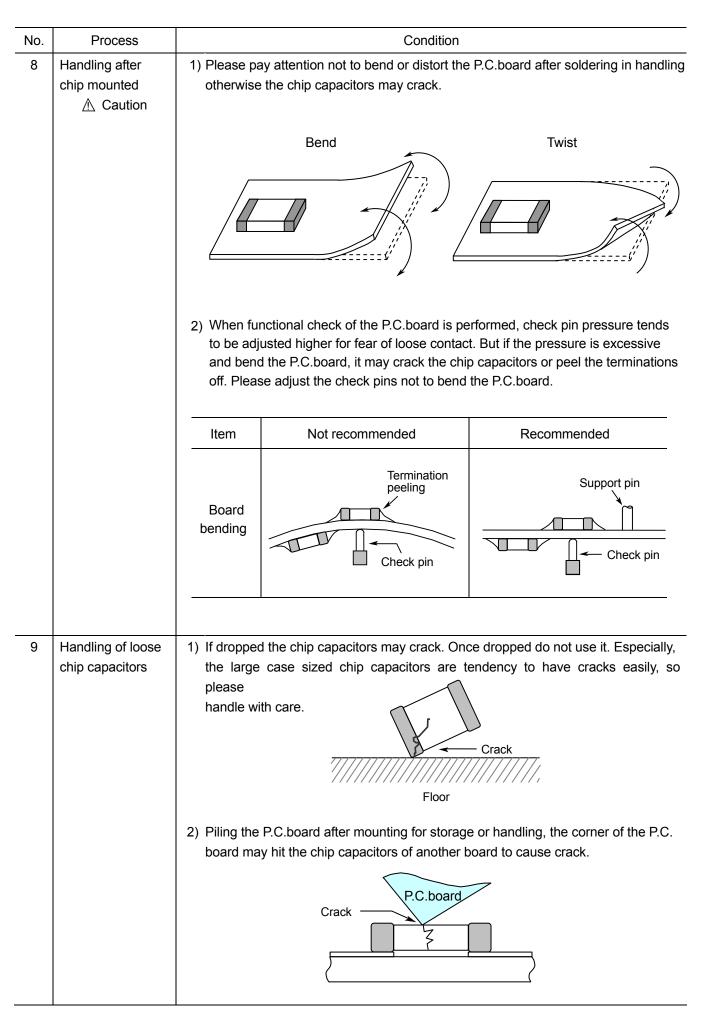

No.	Process	Condition

		Temp. (°C)	Duration (sec.)	Wattage (W)	Shape (mm)		
		300 max.	3 max.	20 max.	Ø 3.0 max.		

No.	Process	Condition
5	Soldering	Direct contact of the soldering iron with ceramic dielectric of chip capacitors may cause crack. Do not touch the ceramic dielectric and the terminations by solder iron.
		5-7. Sn-Zn solder Sn-Zn solder affects product reliability. Please contact TDK in advance when utilize Sn-Zn solder.
		5-8. Countermeasure for tombstone The misalignment between the mounted positions of the capacitors and the land patterns should be minimized. The tombstone phenomenon may occur especially the capacitors are mounted (in longitudinal direction) in the same direction of the reflow soldering. (Refer to JEITA RCR-2335B Annex 1 (Informative) Recommendations to prevent the tombstone phenomenon)
6	Cleaning	If an unsuitable cleaning fluid is used, flux residue or some foreign articles may stick to chip capacitors surface to deteriorate especially the insulation resistance.
		2) If cleaning condition is not suitable, it may damage the chip capacitors.
		2)-1. Insufficient washing (1) Terminal electrodes may corrode by Halogen in the flux.
		(2) Halogen in the flux may adhere on the surface of capacitors, and lower the insulation resistance.
		(3) Water soluble flux has higher tendency to have above mentioned problems (1) and (2).
		2)-2. Excessive washing
		When ultrasonic cleaning is used, excessively high ultrasonic energy output can affect the connection between the ceramic chip capacitor's body and the terminal electrode. To avoid this, following is the recommended condition.
		Power: 20 W/ & max. Frequency: 40 kHz max. Washing time: 5 minutes max.
		2)-3. If the cleaning fluid is contaminated, density of Halogen increases, and it may bring the same result as insufficient cleaning.
7	Coating and molding of the	When the P.C.board is coated, please verify the quality influence on the product.
	P.C.board	Please verify carefully that there is no harmful decomposing or reaction gas emission during curing which may damage the chip capacitors.
		Please verify the curing temperature.

No.	Process	Condition
10	Capacitance aging	The capacitors (Class 2) have aging in the capacitance. They may not be used in precision time constant circuit. In case of the time constant circuit, the evaluation should be done well.
11	Estimated life and estimated failure rate of capacitors	As per the estimated life and the estimated failure rate depend on the temperature and the voltage. This can be calculated by the equation described in JEITA RCR-2335B Annex 6 (Informative) Calculation of the estimated lifetime and the estimated failure rate (Voltage acceleration coefficient: 3 multiplication rule, Temperature acceleration coefficient: 10°C rule) The failure rate can be decreased by reducing the temperature and the voltage but they will not be guaranteed.
12	Others A Caution	The products listed on this specification sheet are intended for use in general electronic equipment (AV equipment, telecommunications equipment, home appliances, amusement equipment, computer equipment, personal equipment, office equipment, measurement equipment, industrial robots) under a normal operation and use condition. The products are not designed or warranted to meet the requirements of the applications listed below, whose performance and/or quality require a more stringent level of safety or reliability, or whose failure, malfunction or trouble could cause serious damage to society, person or property. Please understand that we are not responsible for any damage or liability caused by use of the products in any of the applications below or for any other use exceeding the range or conditions set forth in this specification sheet. If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in this specification, please contact us. (1) Aerospace/Aviation equipment (2) Transportation equipment (cars, electric trains, ships, etc.) (3) Medical equipment (4) Power-generation control equipment (5) Atomic energy-related equipment (6) Seabed equipment (7) Transportation control equipment (8) Public information-processing equipment (9) Military equipment (10) Electric heating apparatus, burning equipment (11) Disaster prevention/crime prevention equipment (12) Safety equipment (13) Other applications that are not considered general-purpose applications, you are
		kindly requested to take into consideration securing protection circuit/device or providing backup circuits in your equipment.

13. Packaging label

Packaging shall be done to protect the components from the damage during transportation and storing, and a label which has the following information shall be attached.

- 1) Inspection No.
- 2) TDK P/N
- 3) Customer's P/N
- 4) Quantity

*Composition of Inspection No.

Example
$$\underline{M}$$
 $\underline{2}$ \underline{A} - \underline{OO} - \underline{OOO} (a) (b) (c) (d) (e)

- a) Line code
- b) Last digit of the year
- c) Month and A for January and B for February and so on. (Skip I)
- d) Inspection Date of the month.
- e) Serial No. of the day

14. Bulk packaging quantity

Total number of components in a plastic bag for bulk packaging: 1,000pcs.

15. TAPE PACKAGING SPECIFICATION

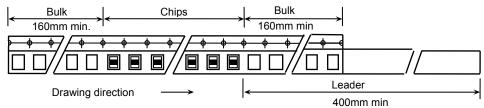

1. CONSTRUCTION AND DIMENSION OF TAPING

1-1. Dimensions of carrier tape

Dimensions of paper tape shall be according to Appendix 2.

Dimensions of plastic tape shall be according to Appendix 3,4.

1-2. Bulk part and leader of taping

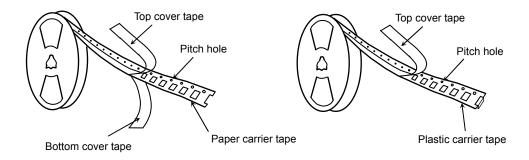

1-3. Dimensions of reel

Dimensions of Ø178 reel shall be according to Appendix 5,6.

Dimensions of Ø330 reel shall be according to Appendix 7,8.

1-4. Structure of taping

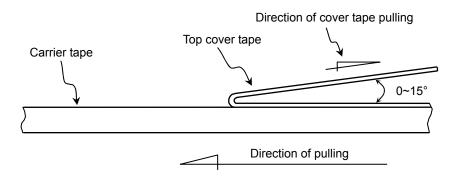

2. CHIP QUANTITY

3. PERFORMANCE SPECIFICATIONS

3-1. Fixing peeling strength (top tape) 0.05-0.7N. (See the following figure.)

- 3-2. Carrier tape shall be flexible enough to be wound around a minimum radius of 30mm with components in tape.
- 3-3. The missing of components shall be less than 0.1%
- 3-4. Components shall not stick to fixing tape.
- 3-5. The fixing tapes shall not protrude beyond the edges of the carrier tape not shall cover the sprocket holes.

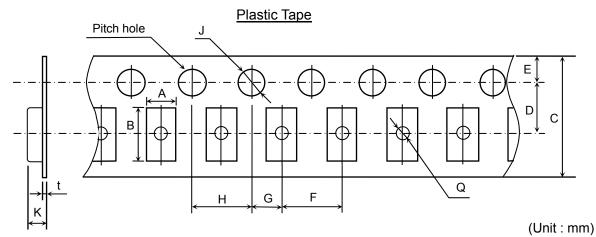

Paper Tape

Symbol Type	А	В	С	D	E	F
C3216 (CC1206)	(1.90)	(3.50)	8.00 ± 0.30	3.50 ± 0.05	1.75 ± 0.10	4.00 ± 0.10
Symbol Type	G	Н	J	Т		
C3216 (CC1206)	2.00 ± 0.05	4.00 ± 0.10	Ø 1.5 +0.10 0	1.10 max.		

^{*} The values in the parentheses () are for reference.

Appendix 3

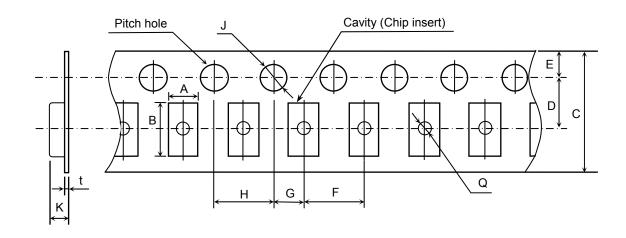

Symbol Type	Α	В	С	D	E	F
C3216 (CC1206)	(1.90)	(3.50)	8.00 ± 0.30	3.50 ± 0.05	1.75 ± 0.10	4.00 ± 0.10
C3225 (CC1210)	(2.90)	(3.60)	$[12.0 \pm 0.30]$	$[5.50 \pm 0.05]$	1.75 ± 0.10	4.00 ± 0.10
Symbol Type	G	Н	J	К	t	Q
C3216 (CC1206)	2.00 ± 0.05	4.00 ± 0.10	Ø 1.5 +0.10	2.50 max.	0.30 max.	Ø 0.50 min.
C3225 (CC1210)	2.00 £ 0.05	4.00 £ 0.10	Ø 1.5 ₀	3.20 max.	0.60 max.	0.50 IIIII.

^{*} The values in the parentheses () are for reference.

^{*} As for 2.5mm thickness products, apply values in the brackets [].

Plastic Tape

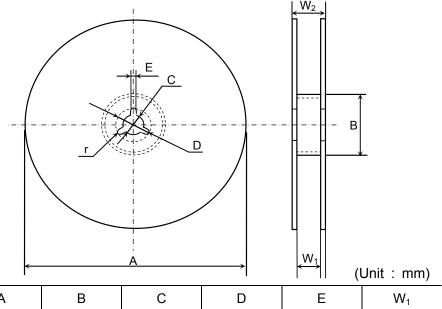

(Unit:mm)

Symbol Type	А	В	С	D	E	F
C4520 (CC1808)	(2.50)	(5.10)				
C4532 (CC1812)	(3.60)	(4.90)	12.0 ± 0.30	5.50 ± 0.05	1.75 ± 0.10	8.00 ± 0.10
C5750 (CC2220)	(5.40)	(6.10)				
Symbol Type	G	Н	J	K	t	Q
			•			
C4520 (CC1808)						
	2.00 ± 0.05	4.00 ± 0.10	Ø 1.5 ^{+0.10}		0.60 max.	Ø 1.50 min.

^{*} The values in the parentheses () are for reference.

C3216, C3225 (As for C3225 type, any thickness of the item except 2.5mm) (Material : Polystyrene)

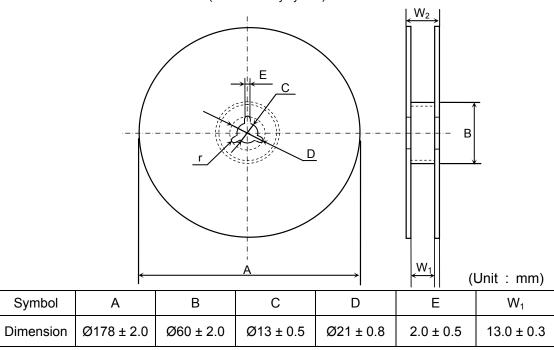

Symbol	Α	В	С	D	Е	W_1
Dimension	Ø178 ± 2.0	Ø60 ± 2.0	Ø13 ± 0.5	Ø21 ± 0.8	2.0 ± 0.5	9.0 ± 0.3

Symbol	W_2	r
Dimension	13.0 ± 1.4	1.0

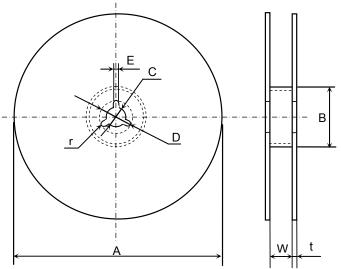

Appendix 6

C3225, C4520, C4532, C5750 (As for C3225 type, applied to 2.5mm thickness products) (Material : Polystyrene)

Symbol	W ₂	r
Dimension	17.0 ± 1.4	1.0

C3216, C3225 (As for C3225 type, any thickness of the item except 2.5mm) $\,$ (Material : Polystyrene)

	•			→	\longleftrightarrow	(Unit :	mm)
Symbol	Α	В	С	D	Е	W	
Dimension	Ø382 max. (Nominal Ø330)	Ø50 min.	Ø13 ± 0.5	Ø21 ± 0.8	2.0 ± 0.5	10.0 ± 1.5	

Symbol	t	r
Dimension	2.0 ± 0.5	1.0

Appendix 8

C3225, C4520, C4532, C5750 (As for C3225 type, applied to 2.5mm thickness products) (Material : Polystyrene)

(Unit: mm)

Symbol	Α	В	С	D	Е	W
Dimension	Ø382 max. (Nominal Ø330)	Ø50 min.	Ø13 ± 0.5	Ø21 ± 0.8	2.0 ± 0.5	14.0 ± 1.5

Symbol	t	r
Dimension	2.0 ± 0.5	1.0
