QUAD SPDT WIDE-BANDWIDTH VIDEO SWITCH WITH LOW ON-STATE RESISTANCE

FEATURES

- **Low Differential Gain and Phase (D_G = 0.64%, D_P = 0.1 Degrees Typ)**
- **Wide Bandwidth (BW = 300 MHz Min)**
- **Low Crosstalk (X_{TALK} = –63 dB Typ)**
- **Low Power Consumption (I_{CC} = 3 μA Max)**
- **Bidirectional Data Flow With Near-Zero Propagation Delay**
- **Low ON-State Resistance (r_{on} = 3 Ω Typ)**
- **V_{CC} Operating Range From 4.5 V to 5.5 V**
- **I_{off} Supports Partial-Power-Down Mode Operation**
- **Data and Control Inputs Provide Undershoot Clamp Diode**
- **Control Inputs Can Be Driven by TTL or 5-V/3.3-V CMOS Outputs**
- **Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II**
- **ESD Performance Tested Per JESD 22**
  - **1000-V Charged-Device Model (C101)**
- **Suitable for Both RGB and Composite-Video Switching**

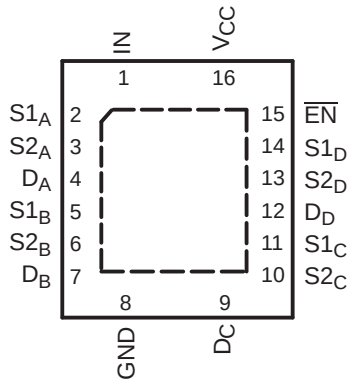
RGY PACKAGE
(TOP VIEW)



DESCRIPTION/ORDERING INFORMATION

The TS5V330 video switch is a 4-bit 1-of-2 multiplexer/demultiplexer with a single switch-enable ($\overline{EN}$) input. When $\overline{EN}$ is low, the switch is enabled and the D port is connected to the S port. When $\overline{EN}$ is high, the switch is disabled and the high-impedance state exists between the D and S ports. The select (IN) input controls the data path of the multiplexer/demultiplexer.

Low differential gain and phase make this switch ideal for composite and RGB video applications. This device has wide bandwidth and low crosstalk, making it suitable for high-frequency applications as well.

This device is fully specified for partial-power-down applications using I_{off}. The I_{off} feature ensures that damaging current will not backflow through the device when it is powered down. This switch maintains isolation during power off.

ORDERING INFORMATION

T_A	PACKAGE(1)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	QFN – RGY	Tape and reel	TS5V330RGYR	TE330
	SOIC – D	Tube	TS5V330D	TS5V330
		Tape and reel	TS5V330DR	
	SSOP (QSOP) – DBQ	Tape and reel	TS5V330DBQR	TE330
	TSSOP – PW	Tube	TS5V330PW	TE330
		Tape and reel	TS5V330PWR	

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

DESCRIPTION/ORDERING INFORMATION (CONTINUED)

To ensure the high-impedance state during power up or power down, $\overline{EN}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

FUNCTION TABLE

INPUTS		INPUT/OUTPUT D	FUNCTION
$\overline{EN}$	IN		
L	L	S1	D port = S1 port
L	H	S2	D port = S2 port
H	X	Z	Disconnect

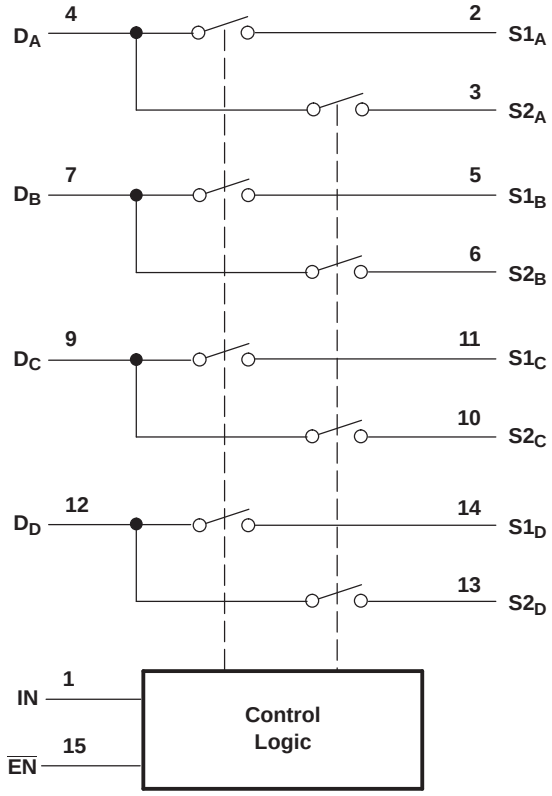
PIN DESCRIPTION

PIN	DESCRIPTION
S1, S2	Analog video I/Os
D	Analog video I/Os
IN	Select input
$\overline{EN}$	Switch-enable input

PARAMETER DEFINITIONS

PARAMETER	DESCRIPTION
r_{on}	Resistance between the D and S ports, with the switch in the ON state
I_{OZ}	Output leakage current measured at the D and S ports, with the switch in the OFF state
I_{OS}	Short-circuit current measured at the I/O pins
V_{IN}	Voltage at IN
V_{EN}	Voltage at $\overline{EN}$
C_{IN}	Capacitance at the control ($\overline{EN}$, IN) inputs
C_{OFF}	Capacitance at the analog I/O port when the switch is OFF
C_{ON}	Capacitance at the analog I/O port when the switch is ON
V_{IH}	Minimum input voltage for logic high for the control ($\overline{EN}$, IN) inputs
V_{IL}	Minimum input voltage for logic low for the control ($\overline{EN}$, IN) inputs
V_{hys}	Hysteresis voltage at the control ($\overline{EN}$, IN) inputs
V_{IK}	I/O and control ($\overline{EN}$, IN) inputs diode clamp voltage
V_I	Voltage applied to the D or S pins when D or S is the switch input
V_O	Voltage applied to the D or S pins when D or S is the switch output
I_{IH}	Input high leakage current of the control ($\overline{EN}$, IN) inputs
I_{IL}	Input low leakage current of the control ($\overline{EN}$, IN) inputs
I_I	Current into the D or S pins when D or S is the switch input
I_O	Current into the D or S pins when D or S is the switch output
I_{off}	Output leakage current measured at the D or S ports, with V_{CC} = 0
t_{ON}	Propagation delay measured between 50% of the digital input to 90% of the analog output when switch is turned ON
t_{OFF}	Propagation delay measured between 50% of the digital input to 90% of the analog output when switch is turned OFF
BW	Frequency response of the switch in the ON state measured at –3 dB
X_{TALK}	Unwanted signal coupled from channel to channel. Measured in –dB. X_{TALK} = 20 log V_O/V_I. This is a nonadjacent crosstalk.
O_{IRR}	Off isolation is the resistance (measured in –dB) between the input and output with the switch OFF.
D_G	Magnitude variation between analog input and output pins when the switch is ON and the dc offset of composite-video signal varies at the analog input pin. In the NTSC standard, the frequency of the video signal is 3.58 MHz, and dc offset is from 0 to 0.714 V.
D_P	Phase variation between analog input and output pins when the switch is ON and the dc offset of composite-video signal varies at the analog input pin. In the NTSC standard, the frequency of the video signal is 3.58 MHz, and dc offset is from 0 to 0.714 V.
I_{CC}	Static power-supply current
I_{CCD}	Variation of I_{CC} for a change in frequency in the control ($\overline{EN}$, IN) inputs
ΔI_{CC}	This is the increase in supply current for each control input that is at the specified voltage level, rather than V_{CC} or GND.

FUNCTIONAL DIAGRAM (POSITIVE LOGIC)



Absolute Maximum Ratings(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage range		–0.5	7	V
V_{IN}	Control input voltage range(2)(3)		–0.5	7	V
$V_{I/O}$	Switch I/O voltage range(2)(3)(4)		–0.5	7	V
I_{IK}	Control input clamp current	V_{IN} < 0		–50	mA
$I_{I/OK}$	I/O port clamp current	$V_{I/O}$ < 0		–50	mA
$I_{I/O}$	ON-state switch current(5)			±128	mA
	Continuous current through V_{CC} or GND			±100	mA
θ_{JA}	Package thermal impedance	D package(6)		73	°C/W
		DBQ package(6)		90	
		PW package(6)		108	
		RGY package(7)		39	
T_{stg}	Storage temperature range		–65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltages are with respect to ground, unless otherwise specified.
(3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
(4) V_I and V_O are used to denote specific conditions for $V_{I/O}$.
(5) I_I and I_O are used to denote specific conditions for $I_{I/O}$.
(6) The package thermal impedance is calculated in accordance with JESD 51-7.
(7) The package thermal impedance is calculated in accordance with JESD 51-5.

Recommended Operating Conditions(1)

		MIN	MAX	UNIT
V_{CC}	Supply voltage range	4	5.5	V
V_{IH}	High-level control input voltage range ($\overline{EN}$, IN)	2	5.5	V
V_{IL}	Low-level control input voltage range ($\overline{EN}$, IN)	0	0.8	V
V_{ANALOG}	Analog I/O voltage range	0	Vcc	V
T_A	Operating free-air temperature range	–40	85	°C

(1) All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

Electrical Characteristics

over recommended operating free-air temperature range, V_{CC} = 5 V ±10% (unless otherwise noted)

PARAMETER		TEST CONDITIONS(1)				MIN	TYP(2)	MAX	UNIT
V_{IK}	$\overline{EN}$, IN	V_{CC} = 4.5 V,	I_{IN} = –18 mA					–1.8	V
V_{hys}	$\overline{EN}$, IN						150		mV
I_{IH}	$\overline{EN}$, IN	V_{CC} = 5.5 V,	V_{IN} and V_{EN} = V_{CC}					±1	µA
I_{IL}	$\overline{EN}$, IN	V_{CC} = 5.5 V,	V_{IN} and V_{EN} = GND					±1	µA
I_{OZ}(3)		V_{CC} = 5.5 V,	V_O = 0 to 5.5 V,	V_I = 0,	Switch OFF			±1	µA
I_{OS}(4)		V_{CC} = 5.5 V,	V_O = 0.5 V_{CC},	V_I = 0,	Switch ON	50			mA
I_{off}		V_{CC} = 0 V,	V_O = 0 to 5.5 V,	V_I = 0				1	µA
I_{CC}		V_{CC} = 5.5 V,	$I_{I/O}$ = 0,	Switch ON or OFF				3	µA
ΔI_{CC}	$\overline{EN}$, IN	V_{CC} = 5.5 V,	One input at 3.4 V,	Other inputs at V_{CC} or GND				2.5	mA
I_{CCD}		V_{EN} = GND, V_{CC} = 5.5 V, D and S ports open, V_{IN} input switching 50% duty cycle						0.25	mA/MHz
C_{IN}	$\overline{EN}$, IN	V_{IN} of V_{EN} = 0, f = 1 MHz					3.5		pF
C_{OFF}	D port	V_I = 0,	f = 1 MHz,	Outputs open,	Switch OFF		6		pF
	S port						4		
C_{ON}		V_I = 0,	f = 1 MHz,	Outputs open,	Switch ON		14		pF
r_{on}(5)		V_{CC} = 4.5 V	V_I = 1 V,	I_O = 13 mA,	R_L = 75 Ω		3	7	Ω
			V_I = 2 V,	I_O = 26 mA,	R_L = 75 Ω		7	10	

(1) V_I, V_O, I_I, and I_O refer to I/O pins.
(2) All typical values are at V_{CC} = 5 V (unless otherwise noted), T_A = 25°C.
(3) For I/O ports, I_{OZ} includes the input leakage current.
(4) The I_{OS} test is applicable to only one ON channel at a time. The duration of this test is less than 1 s.
(5) Measured by the voltage drop between the D and S terminals at the indicated current through the switch. ON-state resistance is determined by the lower of the voltages of the two (D or S) terminals.

Switching Characteristics

over recommended operating free-air temperature range, V_{CC} = 5 V ± 10%, R_L = 75 Ω, C_L = 20 pF (unless otherwise noted) (see Figure 5)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	MIN	TYP	MAX	UNIT
t_{ON}	S	D		2.5	6	ns
t_{OFF}	S	D		1.1	6	ns

Dynamic Characteristics

over recommended operating free-air temperature range, V_{CC} = 5 V ± 10% (unless otherwise noted)

PARAMETER	TEST CONDITIONS				MIN	TYP(1)	MAX	UNIT
D_G(2)	R_L = 150 Ω,	f = 3.58 MHz,	See Figure 6			0.64		%
D_P(2)	R_L = 150 Ω,	f = 3.58 MHz,	See Figure 6			0.1		Deg
BW	R_L = 150 Ω,	See Figure 7			300			MHz
X_{TALK}	R_L = 150 Ω,	f = 10 MHz,	RIN = 10 Ω,	See Figure 8		–63		dB
O_{IRR}	R_L = 150 Ω,	f = 10 MHz,	See Figure 9			–60		dB

(1) All typical values are at V_{CC} = 5 V (unless otherwise noted), T_A = 25°C.
(2) D_G and D_P are expressed in absolute magnitude.

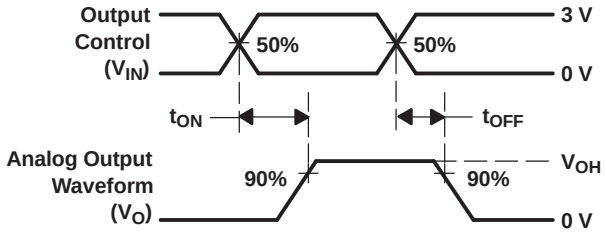
TEST CIRCUIT

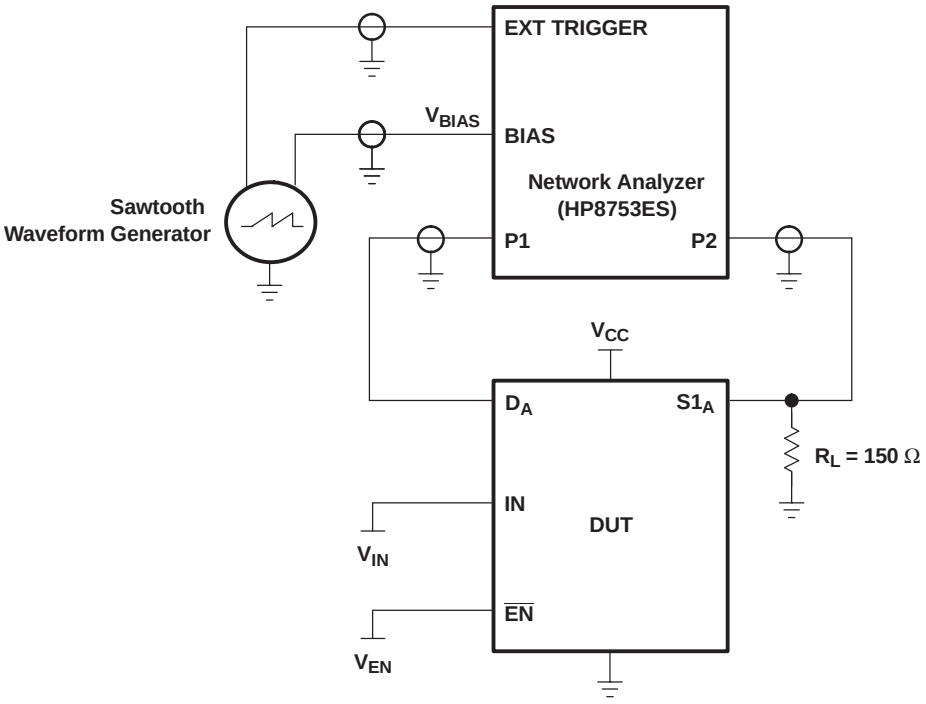


VOLTAGE WAVEFORMS
t_{ON} AND t_{OFF} TIMES

NOTES: A. C_L includes probe and jig capacitance.
B. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, t_r ≤ 2.5 ns, t_f ≤ 2.5 ns.
C. The outputs are measured one at a time, with one transition per measurement.

Figure 5. Test Circuit and Voltage Waveforms

PARAMETER MEASUREMENT INFORMATION



NOTE A: For additional information on measurement method, refer to the TI application report, *Measuring Differential Gain and Phase*, literature number SLOA040.

Figure 6. Test Circuit for Differential Gain/Phase Measurement

Differential gain and phase are measured at the output of the ON channel. For example, when V_{IN} = 0, V_{EN} = 0, and DA is the input, the output is measured at $S1_A$.

HP8753ES Setup

Average = 20 RBW = 300 Hz ST = 1.381 s P1 = –7 dBM CW frequency = 3.58 MHz		

Sawtooth Waveform Generator Setup

V_{BIAS} = 0 to 1 V Frequency = 0.905 Hz

PARAMETER MEASUREMENT INFORMATION

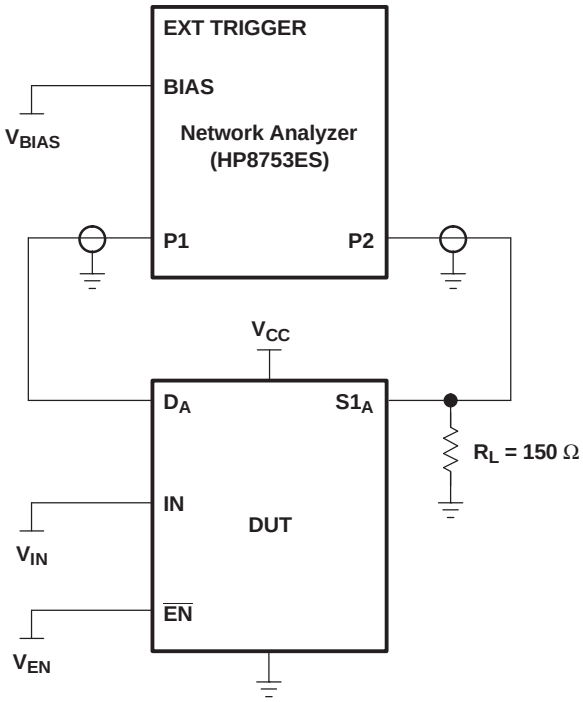


Figure 7. Test Circuit for Frequency Response (BW)

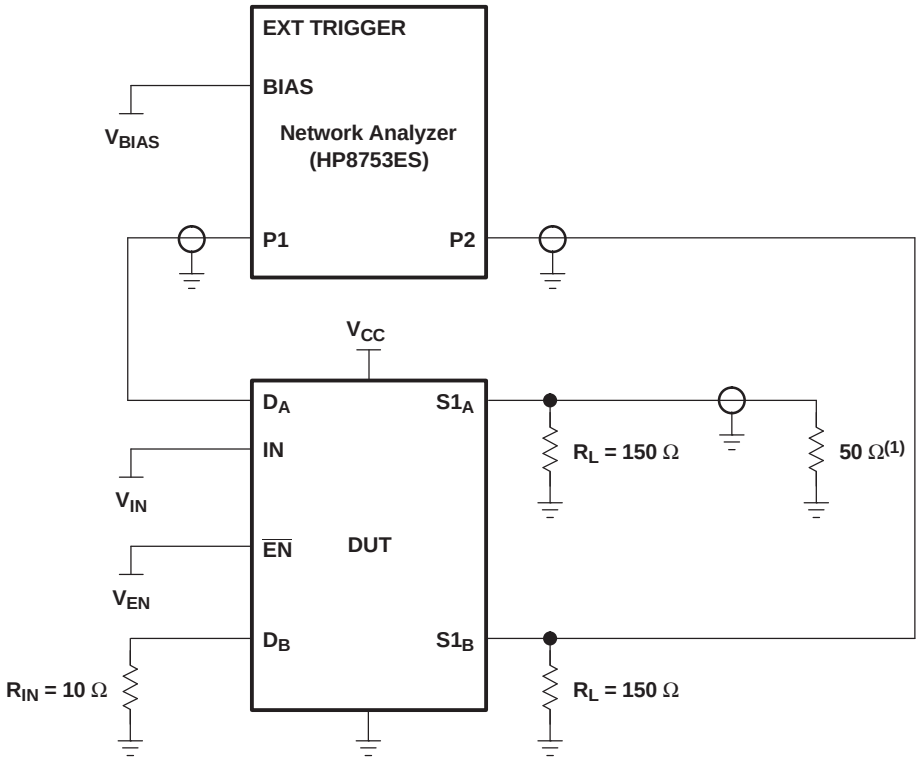
Frequency response is measured at the output of the ON channel. For example, when V_{IN} = 0, V_{EN} = 0, and D_A is the input, the output is measured at $S1_A$. All unused analog I/O ports are left open.

HP8753ES Setup

Average = 4 RBW = 3 Hz V_{BIAS} = 0.35 V ST = 2 s P1 = 0 dBM		

PARAMETER MEASUREMENT INFORMATION



(1) A 50-Ω termination resistor is needed for the network analyzer.

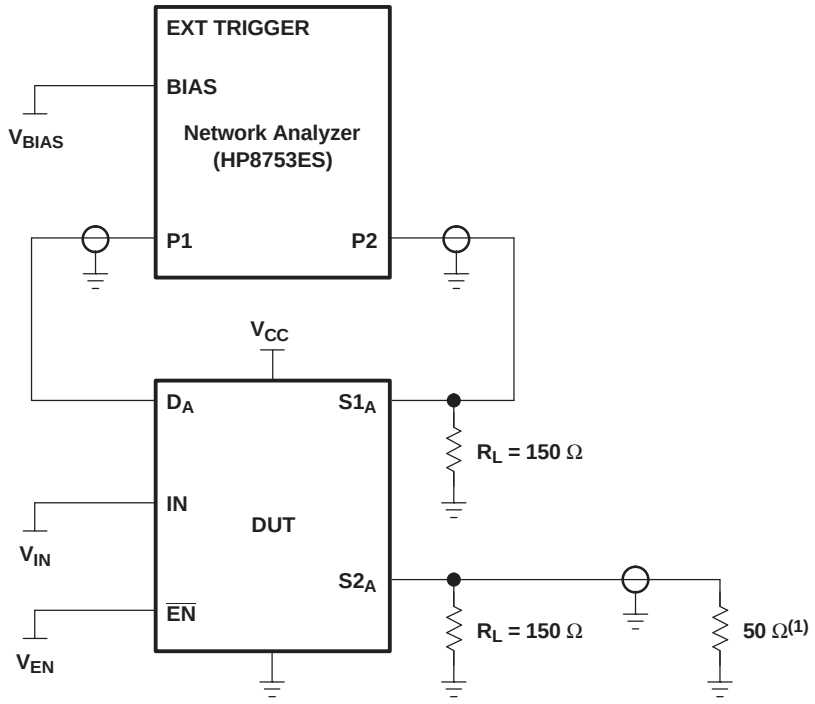
Figure 8. Test Circuit for Crosstalk (X_{TALK})

Crosstalk is measured at the output of the nonadjacent ON channel. For example, when V_{IN} = 0, V_{EN} = 0, and D_A is the input, the output is measured at $S1_B$. All unused analog input (D) ports and output (S) ports are connected to GND through 10-Ω and 50-Ω pulldown resistors, respectively.

HP8753ES Setup

Average = 4 RBW = 3 kHz V_{BIAS} = 0.35 V ST = 2 s P1 = 0 dBM		

PARAMETER MEASUREMENT INFORMATION



(1) A 50-Ω termination resistor is needed for the network analyzer.

Figure 9. Test Circuit for Off Isolation (O_{IRR})

Off isolation is measured at the output of the OFF channel. For example, when V_{IN} = V_{CC}, V_{EN} = 0, and D_A is the input, the output is measured at $S1_A$. All unused analog input (D) ports are left open, and output (S) ports are connected to GND through 50-Ω pulldown resistors.

HP8753ES Setup

Average = 4 RBW = 3 kHz V_{BIAS} = 0.35 V ST = 2 s P1 = 0 dBM

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

G. Package complies to JEDEC MO–241 variation BA.

RGY (R–PVQFN–N16) PLASTIC QUAD FLATPACK NO–LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No–Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

B. This drawing is subject to change without notice.
C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
D. Publication IPC–7351 is recommended for alternate designs.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC–7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
