

# Digital Input Class-D Speaker Amplifier with Audio Processing and mono headphone amplifier

Check for Samples: [TAS2505](#)

## 1 INTRODUCTION

### 1.1 Features

- Digital Input Mono Speaker Amp
- Supports 8-kHz to 96-kHz Sample Rates
- Mono Class-D BTL Speaker Driver (2 W Into 4  $\Omega$  or 1.7 W Into 8  $\Omega$ )
- Mono Headphone Driver
- Two Single-Ended Inputs With Output Mixing and Level Control
- Embedded Power-on-Reset
- Integrated LDO
- Programmable Digital Audio Processing Blocks for Bass Boost, Treble, EQ With up to Six Biquads for Playback
- Integrated PLL Used for Programmable Digital Audio Processing Blocks
- I<sup>2</sup>S, Left-Justified, Right-Justified, DSP, and TDM Audio Interfaces
- I<sup>2</sup>C Control and SPI control with auto-increment
- Full Power-Down Control
- Power Supplies:
  - Analog: 1.5 V–1.95 V
  - Digital Core: 1.65 V–1.95 V
  - Digital I/O: 1.1 V–3.6 V
  - Class-D: 2.7 V–5.5 V (SPKVDD  $\geq$  AVDD)
- 24-Pin QFN Package (4mm  $\times$  4mm)

### 1.2 Applications

- Portable Audio Devices
- White goods
- Portable Navigation Devices

### 1.3 Description

The TAS2505 is a low power digital input speaker amp with support for 24-bit digital I2S data mono playback.

In addition to driving a speaker amp upto 4- $\Omega$ , the device also features a mono headphone driver and a programmable digital-signal processing block. The digital audio data format is programmable to work with popular audio standard protocols (I<sup>2</sup>S, left/right-justified) in master, slave, DSP and TDM modes. The programmable digital-signal processing block can support Bass boost, treble, or EQ functions. An on-chip PLL provides the high-speed clock needed by the digital signal-processing block. The volume level can be controlled by register control. The audio functions are controlled using the I<sup>2</sup>C™ serial bus or SPI bus. The device includes an on-board LDO that runs off the speaker power supply to handle all internal device analog and digital power needs. The included POR as power-on-reset circuit reliably resets the device into its default state so no external reset is required at normal usage; however, the device does have a reset pin for more complex system initialization needs. The device also includes two analog inputs for mixing and muxing in both speaker and headphone analog paths.

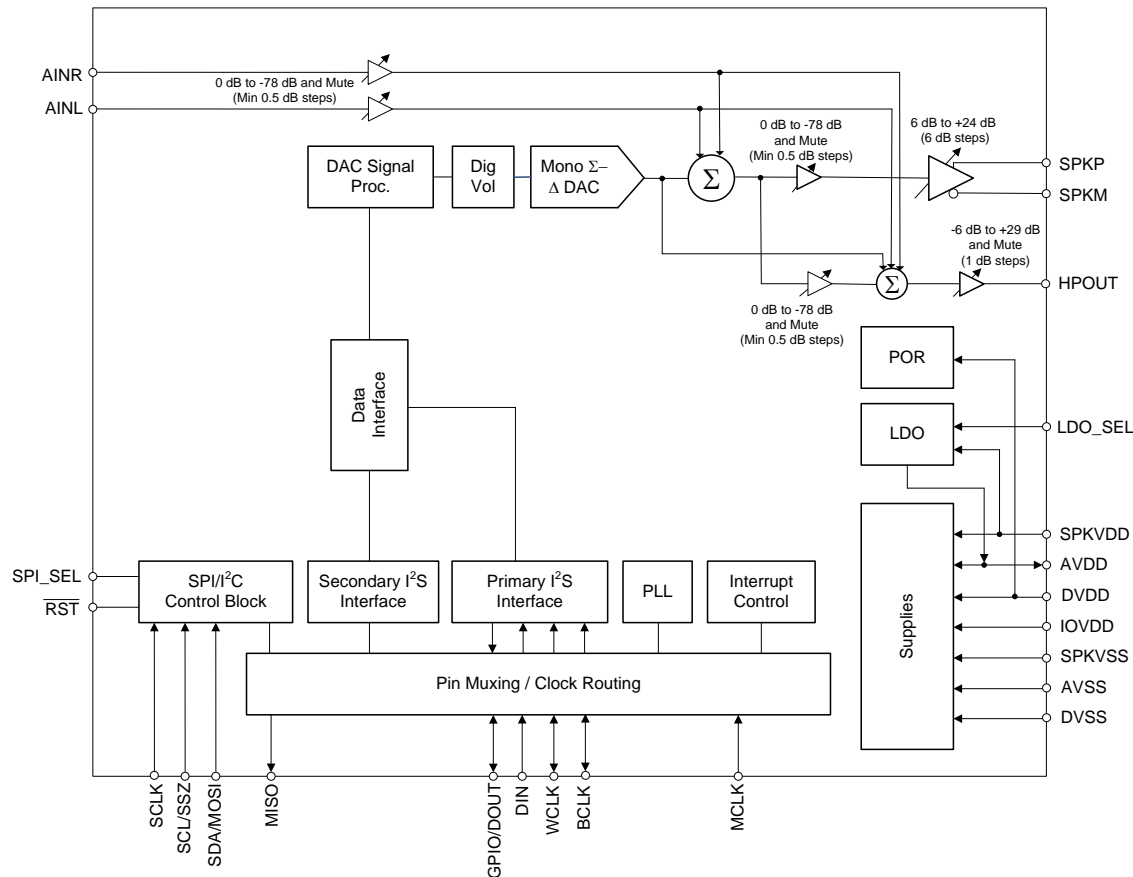

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

I<sup>2</sup>C is a trademark of NXP B.V. Corporation.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## NOTE

This data manual is designed using PDF document-viewing features that allow quick access to information. For example, performing a global search on "page 0 / register 27" produces all references to this page and register in a list. This makes it easy to traverse the list and find all information related to a page and register. Note that the search string must be of the indicated format. Also, this document includes document hyperlinks to allow the user to find a document reference. To come back to the original page, click the green left arrow near the PDF page number at the bottom of the file. The hot-key for this function is alt-left arrow on the keyboard. Another way to find information is to use the PDF bookmarks.

## 2 PACKAGE AND SIGNAL DESCRIPTIONS

## 2.1 Package/Ordering Information

| PRODUCT | PACKAGE | PACKAGE DESIGNATOR | OPERATING TEMPERATURE RANGE | ORDERING NUMBER | TRANSPORT MEDIA, QUANTITY |
|---------|---------|--------------------|-----------------------------|-----------------|---------------------------|
| TAS2505 | QFN-24  | RGE                | −40°C to 85°C               | TAS2505IRGET    | Tape and reel, 250        |
|         |         |                    |                             | TAS2505IRGER    | Tape and reel, 3000       |

## 2.2 Device Information

**Table 2-1. RGE PIN FUNCTIONS**

| PIN       |     | I/O <sup>(1)</sup> | DESCRIPTION   |
|-----------|-----|--------------------|---|
| NAME      | NO. |                    |   |
| SPI_SEL   | 1   | I                  | Selects between SPI and I2C digital interface modes; (1 = SPI mode) (0 = I2C mode)    |
| RST       | 2   | I                  | Reset for logic, state machines, and digital filters; asserted LOW.                   |
| AINL      | 3   | I                  | Analog single-ended line left input   |
| AINR      | 4   | I                  | Analog single-ended line right input  |
| HPOUT     | 5   | O                  | Headphone and Lineout Driver Output   |
| AVSS      | 6   | GND                | Analog Ground, 0V   |
| AVDD      | 7   | PWR                | Analog Core Supply Voltage, 1.5V - 1.95V, tied internally to the LDO output           |
| LDO_SEL   | 8   | I                  | Select Pin for LDO; ties to either SPKVDD or SPKVSS                                   |
| SPKM      | 9   | O                  | Class-D speaker driver inverting output   |
| SPKVDD    | 10  | PWR                | Class-D speaker driver power supply   |
| SPKVSS    | 11  | PWR                | Class-D speaker driver power supply ground supply                                     |
| SPKP      | 12  | O                  | Class-D speaker driver non-inverting output   |
| DIN       | 13  | I                  | Audio Serial Data Bus Input Data  |
| WCLK      | 14  | I/O                | Audio Serial Data Bus Word Clock  |
| BCLK      | 15  | I/O                | Audio Serial Data Bus Bit Clock   |
| MCLK      | 16  | I                  | Master CLK Input / Reference CLK for CLK Multiplier - PLL (On startup PLLCLK = CLKIN) |
| MISO      | 17  | O                  | SPI Serial Data Output  |
| GPIO/DOUT | 18  | I/O/Z              | GPIO / Audio Serial Bus Output  |
| SCL/SSZ   | 19  | I                  | Either I2C Input Serial Clock or SPI Chip Select Signal depending on SPI_SEL state    |
| SDA/MOSI  | 20  | I                  | Either I2C Serial Data Input or SPI Serial Data Input depending on SPI_SEL state.     |
| SCLK      | 21  | I                  | Serial clock for SPI interface  |
| IOVDD     | 22  | PWR                | I/O Power Supply, 1.1V - 3.6V   |
| DVDD      | 23  | PWR                | Digital Power Supply, 1.65V - 1.95V   |
| DVSS      | 24  | GND                | Digital Ground, 0V  |

(1) I = Input, O = Output, GND = Ground, PWR = Power, Z = High Impedance

### 3 ELECTRICAL SPECIFICATIONS

#### 3.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

|   | VALUE   |  | UNIT |
|---|---|--|------|
|   | MIN   | MAX  |      |
| AVDD to AVSS                              | –0.3  | 2.2  | V    |
| DVDD to DVSS                              | –0.3  | 2.2  | V    |
| SPKVDD to SPKVSS                          | –0.3  | 6  | V    |
| IOVDD to IOVSS                            | –0.3  | 3.9  | V    |
| Digital input voltage                     | IOVSS – 0.3   | IOVDD + 0.3  | V    |
| Analog input voltage                      | AVSS – 0.3  | AVDD + 0.3   | V    |
| Operating temperature range               | –40   | 85   | °C   |
| Storage temperature range                 | –55   | 150  | °C   |
| Junction temperature (T <sub>J</sub> Max) |   | 105  | °C   |
| QFN                                       | Power dissipation(with thermal pad soldered to board) | (T <sub>J</sub> Max – T <sub>A</sub> ) / θ <sub>JA</sub> | W    |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### 3.2 THERMAL INFORMATION

| THERMAL METRIC <sup>(1)</sup> |  | TAS2505       | UNITS |
|-------------------------------|--|---------------|-------|
|                               |  | RGE (24 PINS) |       |
| θ <sub>JA</sub>               | Junction-to-ambient thermal resistance       | 32.2          | °C/W  |
| θ <sub>JCTop</sub>            | Junction-to-case (top) thermal resistance    | 30.0          |       |
| θ <sub>JB</sub>               | Junction-to-board thermal resistance         | 9.2           |       |
| ψ <sub>JT</sub>               | Junction-to-top characterization parameter   | 0.3           |       |
| ψ <sub>JB</sub>               | Junction-to-board characterization parameter | 9.2           |       |
| θ <sub>JCbot</sub>            | Junction-to-case (bottom) thermal resistance | 2.2           |       |

#### 3.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

|                       |   |   | MIN  | NOM | MAX  | UNIT             |
|-----------------------|---|---|------|-----|------|------------------|
| AVDD <sup>(1)</sup>   | Power-supply voltage range                              | Referenced to AVSS <sup>(2)</sup>             | 1.5  | 1.8 | 1.95 | V                |
| DVDD                  |   | Referenced to DVSS <sup>(2)</sup>             | 1.65 | 1.8 | 1.95 |                  |
| SPKVDD <sup>(1)</sup> |   | Referenced to SPKVSS <sup>(2)</sup>           | 2.7  |     | 5.5  |                  |
| IOVDD                 |   | Referenced to IOVSS <sup>(2)</sup>            | 1.1  | 1.8 | 3.6  |                  |
|                       | Speaker impedance                                       | Load applied across class-D output pins (BTL) | 4    |     |      | Ω                |
|                       | Headphone impedance                                     | AC-coupled to R <sub>L</sub>                  | 16   |     |      | Ω                |
| V <sub>I</sub>        | Analog audio full-scale input voltage                   | AVDD = 1.8 V, single-ended                    |      | 0.5 |      | V <sub>RMS</sub> |
|                       | Line output load impedance (in half drive ability mode) | AC-coupled to R <sub>L</sub>                  |      | 10  |      | kΩ               |
| MCLK <sup>(3)</sup>   | Master clock frequency                                  | IOVDD = DVDD = 1.8V                           |      |     | 50   | MHz              |
| SCL                   | SCL clock frequency                                     |   |      |     | 400  | kHz              |

- (1) To minimize battery-current leakage, the SPKVDD voltage level should not be below the AVDD voltage level.  
 (2) All grounds on board are tied together, so they should not differ in voltage by more than 0.2 V maximum for any combination of ground signals. By use of a wide trace or ground plane, ensure a low-impedance connection between AVSS and DVSS.  
 (3) The maximum input frequency should be 50 MHz for any digital pin used as a general-purpose clock.

### Recommended Operating Conditions (continued)

over operating free-air temperature range (unless otherwise noted)

|   | MIN | NOM | MAX | UNIT |
|---|-----|-----|-----|------|
| T <sub>A</sub> Operating free-air temperature | –40 |     | 85  | °C   |

### 3.4 Electrical Characteristics

At 25°C, AVDD = 1.8V, IOVDD = 1.8 V, SPKVDD = 3.6 V, DVDD = 1.8 V, f<sub>S</sub> (audio) = 48 kHz, CODEC\_CLKIN = 256 × f<sub>S</sub>, PLL = Off

| PARAMETER   | TEST CONDITIONS  | MIN | TYP   | MAX | UNIT              |
|---|--|-----|-------|-----|-------------------|
| <b>INTERNAL OSCILLATOR—RC_CLK</b>                       |  |     |       |     |                   |
| Oscillator frequency                                    |  |     | 8.48  |     | MHz               |
| <b>Audio DAC – Stereo Single-Ended Headphone Output</b> |  |     |       |     |                   |
| Device Setup  | Load = 16Ω (single-ended), Input & Output CM = 0.9V, DOSR = 128, Device Setup MCLK = 256* f <sub>S</sub> , Channel Gain = 0dB word length = 16 bits; Processing Block = PRB_P1 Power Tune = PTM_P3 |     |       |     |                   |
| Full-scale output voltage (0 dB)                        |  |     | 0.5   |     | V <sub>rms</sub>  |
| ICN Idle channel noise                                  | Measured as idle-channel noise, A-weighted <sup>(1) (2)</sup>  |     | 20.7  |     | μV <sub>rms</sub> |
| THD+N Total harmonic distortion + noise                 | 0-dBFS input, 1-kHz input signal   |     | –78.2 |     | dB                |
| Mute attenuation  | Mute   |     | 103.7 |     | dB                |
| PSRR Power-supply rejection ratio <sup>(3)</sup>        | Ripple on AVDD (1.8 V) = 200 mV <sub>PP</sub> at 1 kHz   |     | 47.2  |     | dB                |
| DR Dynamic range, A-weighted <sup>(1) (2)</sup>         | –60dB 1kHz input full-scale signal   |     | 88.1  |     |                   |
| Gain error  | 0dB, 1kHz input full scale signal  |     | ±0.3  |     | dB                |
| P <sub>O</sub> Maximum output power                     | R <sub>L</sub> = 32 Ω, THD+N ≤ –40 dB  |     | 11    |     | mW                |
|   | R <sub>L</sub> = 16 Ω, THD+N ≤ –40 dB  |     | 18    |     |                   |

- (1) Ratio of output level with 1-kHz full-scale sine-wave input, to the output level with the inputs short-circuited, measured A-weighted over a 20-Hz to 20-kHz bandwidth using an audio analyzer.
- (2) All performance measurements done with 20-kHz low-pass filter and, where noted, A-weighted filter. Failure to use such a filter may result in higher THD+N and lower SNR and dynamic range readings than shown in the Electrical Characteristics. The low-pass filter removes out-of-band noise, which, although not audible, may affect dynamic specification values.
- (3) DAC to headphone-out PSRR measurement is calculated as PSRR = 20 X log(ΔV<sub>HP</sub> / ΔV<sub>AVDD</sub>).

**Electrical Characteristics (continued)**

At 25°C, AVDD = 1.8V, IOVDD = 1.8 V, SPKVDD = 3.6 V, DVDD = 1.8 V,  $f_s$  (audio) = 48 kHz, CODEC\_CLKIN = 256 ×  $f_s$ , PLL = Off

|   |  | SPKVDD = 5.5 V, BTL measurement, CM = 0.9V, class-D gain = 18 dB   |     |       | 2   |      |

- (1) Ratio of output level with 1-kHz full-scale sine-wave input, to the output level with the inputs short-circuited, measured A-weighted over a 20-Hz to 20-kHz bandwidth using an audio analyzer.
- (2) All performance measurements done with 20-kHz low-pass filter and, where noted, A-weighted filter. Failure to use such a filter may result in higher THD+N and lower SNR and dynamic range readings than shown in the Electrical Characteristics. The low-pass filter removes out-of-band noise, which, although not audible, may affect dynamic specification values.
- (3) DAC to headphone-out PSRR measurement is calculated as  $PSRR = 20 \times \log(\Delta V_{HP} / \Delta V_{AVDD})$ .

## 5 Application Overview

The TAS2505 offers a wide range of configuration options. Figure 1-1 shows the simplified functional blocks of the device.

### 5.1 Typical Circuit Configuration

**Figure 5-1. Typical Circuit Configuration**

## 5.2 Circuit Configuration with Internal LDO

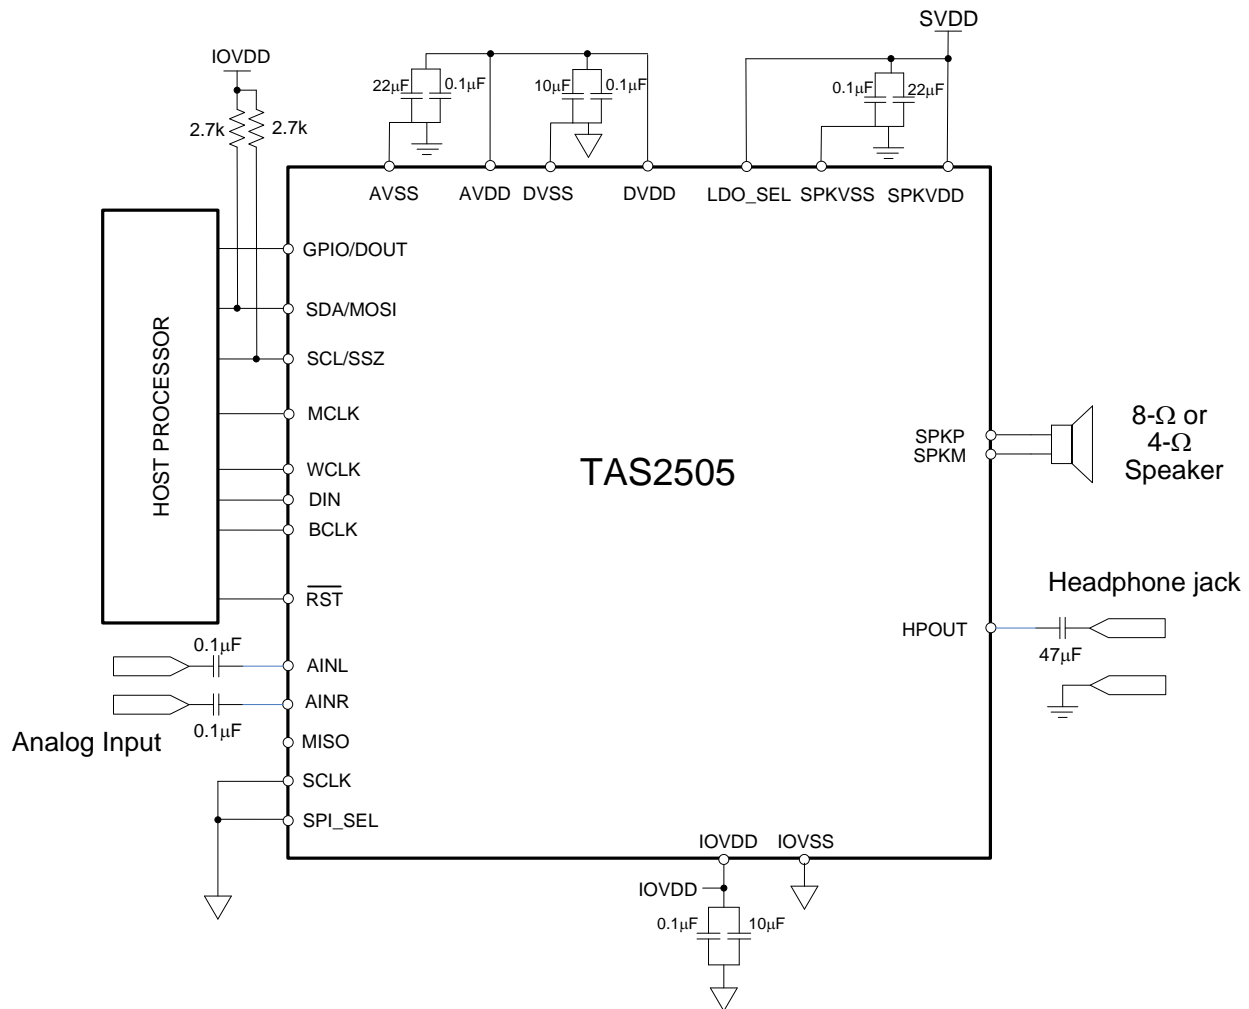

Figure 5-2. Application Schematics for LDO

## 5.3 Device Connections

### 5.3.1 Digital Pins

Only a small number of digital pins are dedicated to a single function; whenever possible, the digital pins have a default function, and also can be reprogrammed to cover alternative functions for various applications.

The fixed-function pins are  $\overline{\text{RST}}$ , LDO\_SEL and the SPI\_SEL pin, which are HW control pins. Depending on the state of SPI\_SEL, the two control-bus pins SCL/SSZ and SDA/MOSI are configured for either I<sup>2</sup>C or SPI protocol.

Other digital IO pins can be configured for various functions via register control. An overview of available functionality is given in [Section 5.3.3](#).

### 5.3.2 Analog Pins

Analog functions can also be configured to a large degree. For minimum power consumption, analog blocks are powered down by default. The blocks can be powered up with fine granularity according to the application needs.

### 5.3.3 Multifunction Pins

Table 5-1 shows the possible allocation of pins for specific functions. The PLL input, for example, can be programmed to be any of 4 pins (MCLK, BCLK, DIN, GPIO).

**Table 5-1. Multifunction Pin Assignments**

|   |                                       | 1                                   | 2                    | 3    | 4    | 5          | 6                | 7    |
|---|---------------------------------------|-------------------------------------|----------------------|------|------|------------|------------------|------|
|   | Pin Function                          | MCLK                                | BCLK                 | WCLK | DIN  | GPIO /DOUT | SCLK             | MISO |

| N | Secondary I <sup>2</sup> S WCLK input |                                     |                      |      |      | E          | E                |      |
| O | Secondary I <sup>2</sup> S DIN        |                                     |                      |      |      | E          | E                |      |
| P | Secondary I <sup>2</sup> S BCLK OUT   |                                     |                      |      |      | E          |                  | E    |
| Q | Secondary I <sup>2</sup> S WCLK OUT   |                                     |                      |      |      | E          |                  | E    |
| R | Secondary I <sup>2</sup> S DOUT       |                                     |                      |      |      |            |                  | E    |
| S | Aux Clock Output                      |                                     |                      |      |      | E          |                  | E    |

(1) S<sup>(1)</sup>: The MCLK pin can drive the PLL and Codec Clock inputs **simultaneously**.

(2) S<sup>(2)</sup>: The BCLK pin can drive the PLL and Codec Clock and audio interface bit clock inputs **simultaneously**.

(3) S<sup>(3)</sup>: The GPIO/DOUT pin can drive the PLL and Codec Clock inputs **simultaneously**.

(4) D: Default Function

(5) E: The pin is **exclusively** used for this function, no other function can be implemented with the same pin. (If GPIO/DOUT has been allocated for General Purpose Output, it cannot be used as the INT1 output at the same time.)

## 5.4 Audio Analog I/O

The TAS2505 features a mono audio DAC. It supports a wide range of analog interfaces to support different headsets such as 16-Ω to 200-Ω impedance and analog line outputs. The TAS2505 can drive a speaker upto 4-Ω impedance.

## 5.5 Analog Signals

The TAS2505 analog signals consist of:

- Analog inputs AINR and AINL, which can be used to pass-through or mix analog signals to output stages
- Analog outputs class-D speaker driver and headphone/lineout driver providing output capability for the DAC, AINR, AINL, or a mix of the three

### 5.5.1 Analog Inputs AINL and AINR

AINL (pin 3 or C2) and AINR (pin 4 or B2) are inputs to Mixer P and Mixer M along with the DAC output. Also AINL and AINR can be configured inputs to HP driver. Page1 / register 12 provides control signals for determining the signals routed through Mixer P, Mixer M and HP driver. Input of Mixer P can be attenuated by Page1 / register 24, input of Mixer M can be attenuated by Page1 / register 25 and input of HP driver can be attenuated by Page1 / register 22. Also AINL and AINR can be configured to a monaural differential input with use Mixer P and Mixer M by Page1 / register 12 setting.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

## 5.6 Audio DAC and Audio Analog Outputs

The mono audio DAC consists of a digital audio processing block, a digital interpolation filter, a digital delta-sigma modulator, and an analog reconstruction filter. The high oversampling ratio (normally DOSR is between 32 and 128) exhibits good dynamic range by ensuring that the quantization noise generated within the delta-sigma modulator stays outside of the audio frequency band. Audio analog outputs include mono headphone and lineout and mono class-D speaker outputs. Because the TAS2505 contains a mono DAC, it inputs the mono data from the left channel, the right channel, or a mix of the left and right channels as  $[(L + R) \div 2]$ , selected by page 0, register 63, bits D5–D4.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

### 5.6.1 DAC

The TAS2505 mono audio DAC supports data rates from 8 kHz to 192 kHz. The audio channel of the mono DAC consists of a signal-processing engine with fixed processing blocks, a digital interpolation filter, multibit digital delta-sigma modulator, and an analog reconstruction filter. The DAC is designed to provide enhanced performance at low sampling rates through increased oversampling and image filtering, thereby keeping quantization noise generated within the delta-sigma modulator and observed in the signal images strongly suppressed within the audio band to beyond 20 kHz. To handle multiple input rates and optimize power dissipation and performance, the TAS2505 allows the system designer to program the oversampling rates over a wide range from 1 to 1024 by configuring page 0, register 13 and page 0 / register 14. The system designer can choose higher oversampling ratios for lower input data rates and lower oversampling ratios for higher input data rates.

The TAS2505 DAC channel includes a built-in digital interpolation filter to generate oversampled data for the delta-sigma modulator. The interpolation filter can be chosen from three different types, depending on required frequency response, group delay, and sampling rate.

The DAC path of the TAS2505 features many options for signal conditioning and signal routing:

- Digital volume control with a range of -63.5 to +24dB
- Mute function

In addition to the standard set of DAC features the TAS2505 also offers the following special features:

- Digital auto mute
- Adaptive filter mode

#### 5.6.1.1 DAC Processing Blocks — Overview

The TAS2505 implements signal-processing capabilities and interpolation filtering via processing blocks. These fixed processing blocks give users the choice of how much and what type of signal processing they may use and which interpolation filter is applied.

The choices among these processing blocks allows the system designer to balance power conservation and signal-processing flexibility. [Table 5-2](#) gives an overview of all available processing blocks of the DAC channel and their properties. The resource-class column gives an approximate indication of power consumption for the digital (DVDD) supply; however, based on the out-of-band noise spectrum, the analog power consumption of the drivers (AVDD) may differ.

The signal-processing blocks available are:

- First-order IIR
- Scalable number of biquad filters

The processing blocks are tuned for common cases and can achieve high image rejection or low group delay in combination with various signal-processing effects such as audio effects and frequency shaping. The available first-order IIR and biquad filters have fully user-programmable coefficients.

**Table 5-2. Overview – DAC Predefined Processing Blocks**

| Processing Block No. | Interpolation Filter | Channel | First-Order IIR Available | Number of Biquads | Resource Class |
|----------------------|----------------------|---------|---------------------------|-------------------|----------------|
| PRB_P1               | A                    | Mono    | Yes                       | 6                 | 6              |
| PRB_P2               | A                    | Mono    | No                        | 3                 | 4              |
| PRB_P3               | B                    | Mono    | Yes                       | 6                 | 4              |

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

### 5.6.2 Digital Mixing and Routing

The TAS2505 has four digital mixing blocks. Each mixer can provide either mixing or multiplexing of the digital audio data. The first mixer/multiplexer can be used to select input data for the mono DAC from left channel, right channel, or (left channel + right channel) / 2 mixing. This digital routing can be configured by writing to page 0, register 63, bits D5–D4.

### 5.6.3 Analog Audio Routing

The TAS2505 has the capability to route the DAC output to either the headphone or the speaker output. If desirable, both output drivers can be operated at the same time while playing at different volume levels. The TAS2505 provides various digital routing capabilities, allowing digital mixing or even channel swapping in the digital domain. All analog outputs other than the selected ones can be powered down for optimal power consumption.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

### 5.6.4 5V LDO

The TAS2505 has a built-in LDO which can generate the analog supply (AVDD) also the digital supply (DVDD) from input voltage range of 2.7 V to 5.5 V with high PSRR. If combined power supply current is 50 mA or less, then this LDO can deliver power to both analog and digital power supplies. If the only speaker power supply is present and LDO Select pin is enabled, the LDO can power up without requiring other supplies. This LDO requires a minimum dropout voltage of 300 mV and can support load currents up to 50 mA. For stability reasons the LDO requires a minimum decoupling capacitor of 1  $\mu$ F ( $\pm 50\%$ ) on the analog supply (AVDD) pin and the digital supply (DVDD) pin. If use this LDO output voltage for the digital supply (DVDD) pin, the analog supply (AVDD) pin connected to the digital supply (DVDD) externally is required.

The LDO is by default powered down for low sleep mode currents and can be enabled driving the LDO\_SELECT pin to SPKVDD (Speaker power supply). When the LDO is disabled the AVDD pin is tri-stated and the device AVDD needs to be powered using external supply. In that case the DVDD pin is also tri-stated and the device DVDD needs to be powered using external supply. The output voltage of this LDO can be adjusted to a few different values as given in the [Table 5-3](#).

**Table 5-3. AVDD LDO Settings**

| Page-1, Register 2, D(5:4) | LDO Output |
|----------------------------|------------|
| 00                         | 1.8 V      |
| 01                         | 1.6 V      |
| 10                         | 1.7 V      |
| 00                         | 1.5 V      |

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

### 5.6.5 POR

TAS2505 has a POR (Power On Reset) function. This function insures that all registers are automatically set to defaults when a proper power up sequence is executed.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

### 5.6.6 CLOCK Generation and PLL

The TAS2505 supports a wide range of options for generating clocks for the DAC sections as well as interface and other control blocks. The clocks for the DAC require a source reference clock. This clock can be provided on a variety of device pins, such as the MCLK, BCLK, or GPIO pins. The source reference clock for the codec can be chosen by programming the CODEC\_CLKIN value on page 0, register 4, bits D1–D0. The CODEC\_CLKIN can then be routed through highly-flexible clock dividers shown in to generate the various clocks required for the DAC and the Digital Effects section. In the event that the desired audio clocks cannot be generated from the reference clocks on MCLK, BCLK, or GPIO, the TAS2505 also provides the option of using the on-chip PLL which supports a wide range of fractional multiplication values to generate the required clocks. Starting from CODEC\_CLKIN, the TAS2505 provides several programmable clock dividers to help achieve a variety of sampling rates for the DAC and clocks for the Digital Effects sections.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

### 5.6.7 Digital Audio and Control Interface

#### 5.6.7.1 Digital Audio Interface

Audio data is transferred between the host processor and the TAS2505 via the digital audio data serial interface, or audio bus. The audio bus on this device is flexible, including left- or right-justified data options, support for I<sup>2</sup>S or PCM protocols, programmable data-length options, a TDM mode for multichannel operation, flexible master/slave configurability for each bus clock line, and the ability to communicate with multiple devices within a system directly.

The audio bus of the TAS2505 can be configured for left- or right-justified, I<sup>2</sup>S, DSP, or TDM modes of operation, where communication with standard telephony PCM interfaces is supported within the TDM mode. These modes are all MSB-first, with data width programmable as 16, 20, 24, or 32 bits by configuring page 0, register 27, bits D5–D4. In addition, the word clock and bit clock can be independently configured in either master or slave mode for flexible connectivity to a wide variety of processors. The word clock is used to define the beginning of a frame, and may be programmed as either a pulse or a square-wave signal. The frequency of this clock corresponds to the maximum of the selected DAC sampling frequencies.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

#### 5.6.7.2 Control Interface

The TAS2505 control interface supports SPI or I2C communication protocols, with the protocol selectable using the SPI\_SEL pin. For SPI, SPI\_SEL should be tied high; for I2C, SPI\_SEL should be tied low. It is not recommended to change the state of SPI\_SEL during device operation.

#### 5.6.7.2.1 I<sup>2</sup>C Control Mode

The TAS2505 supports the I<sup>2</sup>C control protocol, and will respond to the I<sup>2</sup>C address of 0011 000. I<sup>2</sup>C is a two-wire, open-drain interface supporting multiple devices and masters on a single bus. Devices on the I<sup>2</sup>C bus only drive the bus lines LOW by connecting them to ground; they never drive the bus lines HIGH. Instead, the bus wires are pulled HIGH by pullup resistors, so the bus wires are HIGH when no device is driving them LOW. This way, two devices cannot conflict; if two devices drive the bus simultaneously, there is no driver contention.

#### 5.6.7.2.2 SPI Digital Interface

In the SPI control mode, the TAS2505 uses the pins SCL/SSZ=SSZ, SCLK=SCLK, MISO=MISO, SDA/MOSI=MOSI as a standard SPI port with clock polarity setting of 0 (typical microprocessor SPI control bit CPOL = 0). The SPI port allows full-duplex, synchronous, serial communication between a host processor (the master) and peripheral devices (slaves). The SPI master (in this case, the host processor) generates the synchronizing clock (driven onto SCLK) and initiates transmissions. The SPI slave devices (such as the TAS2505) depend on a master to start and synchronize transmissions. A transmission begins when initiated by an SPI master. The byte from the SPI master begins shifting in on the slave MOSI pin under the control of the master serial clock (driven onto SCLK). As the byte shifts in on the MOSI pin, a byte shifts out on the MISO pin to the master shift register.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

#### 5.6.7.3 Power Supply

The TAS2505 integrates a large amount of digital and analog functionality, and each of these blocks can be powered separately to enable the system to select appropriate power supplies for desired performance and power consumption. The device has separate power domains for digital IO, digital core, analog core, analog input, headphone driver, and speaker drivers. If desired, all of the supplies (except for the supplies for speaker drivers, which can directly connect to the battery) can be connected together and be supplied from one source in the range of 1.65 to 1.95V. Individually, the IOVDD voltage can be supplied in the range of 1.1V to 3.6V. For improved power efficiency, the digital core power supply can range from 1.26V to 1.95V. The analog core supply can either be derived from the internal LDO accepting an SPKVDD voltage in the range of 2.7V to 5.5V, or the AVDD pin can directly be driven with a voltage in the range of 1.5V to 1.95V. The speaker driver voltages (SPKVDD) can range from 2.7V to 5.5V.

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

#### 5.6.7.4 Device Special Functions

- Interrupt generation
- Flexible pin multiplexing

For more detailed information see the *TAS2505 Application Reference Guide* ([SLAU472](#)).

## 6 Register Map

### 6.1 Register Map Summary

**Table 6-1. Summary of Register Map**

| Decimal  |          | Hex      |             | DESCRIPTION   |
|----------|----------|----------|-------------|---|
| PAGE NO. | REG. NO. | PAGE NO. | REG. NO.    |   |
| 0        | 0        | 0x00     | 0x00        | Page Select Register  |
| 0        | 1        | 0x00     | 0x01        | Software Reset Register                                       |
| 0        | 2 - 3    | 0x00     | 0x02 - 0x03 | Reserved Registers  |

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**TAPE AND REEL INFORMATION**

RGE (S-PVQFN-N24)

PLASTIC QUAD FLATPACK NO-LEAD

4204104/G 07/11

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - This drawing is subject to change without notice.
  - Quad Flatpack, No-Leads (QFN) package configuration.
  - The package thermal pad must be soldered to the board for thermal and mechanical performance.
  - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
  - Falls within JEDEC MO-220.

### THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

4206344-4/AD 04/13

NOTES: A. All linear dimensions are in millimeters

RGE (S-PVQFN-N24)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
